                                                                                                                                                                                                      02-AUG-2001
 The genes and their secreted protein rangments or variants.

The genes and their secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in so angule or by determining the presence of mutations in the new genes. Specific uses are described for each of the 50 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental aborders, haematopoietic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rhematoid arthritis), inflammation, allergies, neurological disorders, eig., Alzheimer's disease, Parkinson's disease), cognitive disorders, schizophrenia, asthma, allergies, neurological disorders, schizophrenia, asthma, allergies, nadiofections. The proteins can also be used to ald wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties.

Antibodies specific for a protein of the invention can be used in alleyateling symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked in manners associated with the disorders mentioned above, and contracted and additive or preservative to modify storage properties.

Antibodies specific for a protein of the invention can be used in alleyateling symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked in manners.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                   AAD08345-AAD08394 represent cDNAs corresponding to 50 human secreted protein genes and AAE03898-AAE03947 represent the proteins they encode. AAE03948-AAE03996 represent human secreted protein fragments or variants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

The invention relates to human polynuclectides (AAIG3803-AAI64012) and the encoded proteins (AAM43497-AAM4360) useful for preventing, treating cor ameliorating medical conditions e.g. by protein or gene therapy. The genes were isolated from a range of human tissues disclosed in the genes were isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, c. g., breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune thirroiditis, diabetes mellitus, conting disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.

CNOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly con my mypo at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; antiarthritic; antirheumatic; antiproliferative; vasotropic; cerebroprotective; nootropic; neuroprotective; antibacterial; virucide; fungicide; ophthalmological; cytostatic; immunosuppressive; nootropic; neuroprotective; antiallergic; hepatotropic; antidiabetic; antilnflammatory; antiulcer; vulnerary; anticonvulsant; antibacterial; antiparastic; cardiant; gene therapy; cancer; immune disorder; cardiovascular disorder; neurological disease; infection; human; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                            New isolated nucleic acids and polypeptides, useful for diagnosing, treating and/or preventing human diseases and disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

The invention relates to human polynucleotides (AAI63803-AAI64012) and the encoded proteins (AAM434497-AAM43660) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes ware isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (antigaonists or useful in the diagnosis, treatment and prevention of: (a) cancer, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, cutoimmune haemolytic anamia, autoimmune thyroiditis, diabetes mellitus, collitis; (c) cardiovascular disorders such as myocardial ischemenias; (c) mutiple sclerosis, rheumatoid arthritis and ulcerative (c) wound healing; (e) neurological diseases e.g. cerebral anoxia and parasitic infections.

CC on the sequence data for this patent did not form part of the correct or true was obtained in electronic format directly and from WIPO at ffp. Wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
               New isolated nucleic acids and polypeptides, useful for diagnosing, treating and/or preventing human diseases and disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence of genomic DNA encoding human histocompatibility antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ;

THE DNA may be used to detect the HLA-B 27 gene (opt. mutated) in human genetic material. The HLA-B 27 may be used to detect anti-HLA-B 27 antibodies in human serum. The antibodies may be used to determine HLA-B 27 levels in human serum, e.g. for diagnosis of rheumatic disorders, esp. ankylosing spondylitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /.cap. ...

```

```
It is a non-coding regulatory sequence functioning as an internal entry point for the eukaryotic ribosomal subunits when located within a mRNA mol. It enables the translational start codon of the beta-2 microglobulin, downstream of the HIA-B7 stop codon on this biscistronic mRNA to be recognised by the ribosome"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   "ppR322 backbone contg. bacterial origin of replication, it represents nucleotides 2244-3193"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This HLA-B7 antigen encoding plasmid was developed to incorporate many advantageous features, eg. the kanamycin resistance gene. The eradication of two open reading frames encoding portions of SV40 viral proteins lowers the risk of tumourigenicity. The vector may also operate as a cassette into which cistrons may be inserted and removed at will for the transcription and subsequent translation of peptides of interest. The vector is used partic. for the treatment of neoplastic disease, eg. melanoma, and provides enhanced gene delivery and expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   a

Genetic predisposition to seronegative spondyloarthropathies (SNSA) is detected by determining the absence of a cytosine nuclectide in the 3% flanking region (see also AATG1647 + 48) of an HIA-B gene at a position corresponding to nuclectide 4495 of the HIA-B27 consensus sequence given in AATG1639. Probes and primers (see also AATG1640-46) based on this region can be used in diagnostic assays to detect the genetic predisposition to SNSA, and permit the distinction of B27+ individuals who are resistant to SNSA from B27+ normal individuals who are resistant to such diseases.

to the kanamycin resisitance gene, contains the plasmid DNA encoding the
heavy (human HLA-B7) and light (beta-2 microglobulin) proteins of a
class I major hisotocompatibility complex (MHC) antigen. The plasmid is
designed to express these two proteins via a bicistronic mRNA in
designed to express these two proteins via a bicistronic mRNA in
c eukaryotic cells. Initiation of transcription of the mRNA is dependent
on a Rous Sarcoma Virus (RSV) promoter sequence deriv. from the 3' long
terminal repeat. Termination of transcription is dependent upon the
plyadenylation signal sequence deriv. from the bovine growth hormone
c plyadenylation signal sequence deriv. from the bovine growth hormone
gene. Bukaryotic cell translation of the heavy chain is regulated by the
controlled by the CITE Finally the replication of the plasmid in
bacterial cells is controlled by the presence of a bacterial origin of
replication. The vector is used partic. for the treatment of neoplastic
in the controlled by the CITE factor.

c replication and provides enhanced gene delivery and expression

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention provides methods to identify a therapeutic or prophylactic agent that modulates a T lymphocyte population found in a subject having a sterile inflammatory disease, autoimmune disorder, immunodeficiency disease, cancer or graft-versus-host-disease (GVHD). The methods can be used to identify therapeutic or prophylactic agents that modulate T lymphocyte populations in subjects having a sterile inflammatory disease
                                                                                                                                                                                                                                     New polynucleotides encoding breast tumor specific proteins, useful for prevention, treatment and diagnosis of breast cancer \cdot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Studying changes in gene expression in T lymphocytes used to identify therapeutic or prophylactic agents which modulate T lymphocyte
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                   The present invention provides the coding sequences for a number of breast cancer related proteins. These can be used in vaccinations against, diagnosis of and treatment of cancer, particularly breast

cc (e.g. psoriasis, rheumatoid arthritis, glomerulonephritis, asthma, allergic rhinitis, cardiac and renal reperfusion injury, thrombosis, cadult respiratory distress syndrome, inflammatory bowel disease, Crohn's disease, ulcerative colitis, periodontal disease, lymphocytopenias, autoimmune lymphoproliferative syndrome, severe combined immunodeficiency syndrome, wasvere combined immunodeficiency syndrome, Maxia-telangiectasia, Cartilagerain hypoplasia, immunodeficiency with thymoma and leukocyte adhesion deficiency 1), cancer (15 T lymphocyte leukemia/lymphoma's are listed in the specification), immunodeficiency disease, autoimmune disorder (20 clisted in the specification) or a genetic disease. The methods can also be used to identify an agent that induces the differentiation of cuiescent pre-, cortical or medullary T lymphocytes into a differentiated T lymphocyte subpopulation. The methods are especially useful for identifying cytokine genes, genes encoding cell surface receptors and genes encoding intermediary signaling molecules. Sequences compared to the specification of the sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           нuman; 5' EST; expressed sequence tag; secreted protein; cDNA isolation;

No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer

cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAS with intact 5' ends and can therefore be used to obtain full length cDNAS and genomic DNAS. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 in the

The invention relates to human polynucleotides (AAI63803-AAI64012) and the encoded proteins (AAM434497-AAM43660) useful for preventing, treating crameliorating medical conditions e.g. by protein or gene therapy. The genes were isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; antiarthritic; antirheumatic; antiprollferative; vasotropic;
cerebroprotective; nootropic; neuroprotective; antibacterial; virucide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated nucleic acids and polypeptides, useful for dlagnosing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

XX (HUMA-) HUMAN GENOME SCI INC.

XX (HUMA-) HUMAN GENOME SCI INC.

XX WPI; 2001-488781/53.

New isolated nucleic acids and polypeptides, useful for diagnosing, treating and/or preventing human diseases and disorders - treating and/or preventing human polynucleotides (AAIG3803-AAIG4012) and the encoded proteins (AAM4)3497-AAM4360) useful for preventing, treating CC or ameliorating medical conditions e.g. by protein or gene therapy. The specification The nucleic acids, proteins, antibodies and (antibodois care useful in the diagnosis, treatment and prevention of; (a) cancer, c.g. bone, bone marrow, breast, gastrointestinal tract, liver, lung, or uropential, (b) immune disorders e.g. Addison's diabetes mellitus, cutoimmune haemolytic aneamia, autoimmune thyroiditis, diabetes mellitus, colinis; (c) cardiovascular disorders such as myocardial isochaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and on parastic infections.

CC toli solitis; (c) cardiovascular diseases such as wiral, bacterial, fungal and parastic infections.

CC tolitis; (c) cardiovascular diseases such as wiral, bacterial, fungal and parastic infections.

CC tolitis; (c) cardiovascular diseases such as viral, bacterial, fungal and parastic infections.

CC printed specification, but was obtained in electronic format directly from WIPO at ftp.WiPo.int/Pub/published_pct_sequences.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 4, Application US/08718964

Sequence 4, Application US/08718964

Patent No. 5932694

GENERAL INFORMATION:
APPLICANT: Wan der Bruggen, Pierre; Mandruzzato, Susanna;
APPLICANT: Boon-Falleur, Thierry
APPLICANT: Boon-Falleur, Therry
TITLE OF INVENTION: Nucleic Acid Molecule Encoding A Functional
TITLE OF INVENTION: Protein, The Protein So Encoded And Uses Thereof
NUMBER OF SEQUENCES: 6
CORRESPONDENCE ADDRESS:
ADDRESSEE: Felfe & Lynch
STREET: New York City
STATE: New York City
STATE: New York
STATE: New York
MEDIUM TYPE: Diskette, 3.5 inch, 360 kb storage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 5, Application US/09109273
Patent No. 6063760
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Alnemri, Emad S.
APPLICANT: Fernandez-Alnemri, Teresa
TITLE OF INVENTION: FADD-LIKE ANTI-APOPTOTIC MOLECULES, METHODS OF
TITLE OF INVENTION: Of MAKING THE SAME
NUMBER OF SEQUENCES: 17
CORRESPONDENCE ADDRESS:
                                                                                                                        TITLE OF INVENTION: FADD-LIKE ANTI-APOPTOTIC MOLECULES, METHODS OF TITLE OF INVENTION: USING THE SAME, AND COMPOSITIONS FOR AND METHODS TITLE OF INVENTION: OF MAKING THE SAME NUMBER OF SEQUENCES: 17

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Description

N.Alternate names: heat shock protein 701V; hsp701V protein
C.Species: Paracentrotus lividus (common urchin)
C.Date: 10-Jun-1993 #sequence_revision 10-Jun-1993 #text_change 20-Aug-1999
C.Accession: JC1391
R.Scorso, G.: Scardina, G.; Ferraro, M.G.
Gene 121, 353-358, 1992
A.Fitle: Characterization of a new member of the sea urchin Paracentrotus lividus hsp
A.Reference number: JC1391; MUID:93077053
A.Reference number: JC1391
A.Molecule type: DNA
A.Residues: 1-639 <SCO>
A.Coss-references: EMBL:X61379; NID:9312916; PIDN:CAA43653.1; PID:9312917

N:Alternate names: 70k heat shock cognate protein aginactin; F-actin capping protein agi
C;Species: Dictyostelium discoideum
C;Species: Dictyostelium discoideum
C;Accession: A48872
C;Accession: A48872
J. Biol. Chem. 268, 23267-23274, 1993
A;Title: Aginactin, an agonist-regulated F-actin capping activity is associated with an A;Reference number: A48872
A;Accession: A48872
A;Accession: A48872
A;Status: preliminary
A;Molecule type: mRNA
A;Residues: 1-636 <EDD>

A. Cross-references: GB:M18540; NID:g156351; PIDN:AAA28078.1; PID:g156352
A.Note: genomic clones representing six distinct members of the hsp70 gene family wer A.Note: genomic clones representing six distinct members of the hsp70 gene family wer A.Note: one of the three introns in hsp70A is in a position similar to an intron in D G. Genetics:
A.Gene: hsp70A
A.Map position: IV
A.Introns: 69/1; 331/3; 558/3
A.Map position: involved in protein folding and assembling/disassembling of protein co G. Superfamily: heat shock protein 70
C. Superfamily: heat shock; molecular chaperone; stress-induced protein

S37394
Ginar-type molecular chaperone hsc70 - slime mold (Dictyostellum discoideum)
N;Alternate names: heat shock cognate protein 70
C;Species: Dictyostellum discoideum
C;Species: Ji-Dec-1993 #sequence_revision 31-Dec-1993 #text_change 20-Aug-1999
C;Accession: S37394
R;Haus, U; Trommler, P.; Fisher, P.R.; Hartmann, H.; Lottspeich, F.; Noegel, A.A.; Schl
EMBO J. 12, 3763-3771, 1993
A;Title: The heat shock cognate protein from Dictyostellum affects actin polymerization A;Accession: S37394; MUID:94008983
A;Accession: S37394
A;Molecule type: mRNA
A;Residues: 1-640 < HAU>
A;Cross-references: EMBL:X75263; NID:9433874; PIDN:CAA53039.1; PID:9433875
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A,Gene: hsc70
C;Function:
A.Description: involved in protein folding and assembling/disassembling of protein compl
C;Superfamily: heat shock protein 70
C;Keywords: ATP; molecular chaperone

PREXISTENT PROTEINS AGAINST AGGREGATION AND MEDLATE THE FOLDING OF NEWLY TRANSLATED POLYPEPTIDES IN THE CYTOSOL AS WELL AS WITHIN OFF RETICULUM PLAY AN ADDITIONAL ROLE BY PROVIDING A DRIVING FORCE FOR RETICULUM PLAY AN ADDITIONAL ROLE BY PROVIDING A DRIVING PROCESSES THROUGH THEIR ABILITY TO RECOGNIZE NONNATIVE CONFORMATIONS OF OTHER PROTEINS. THEY PARTICIPATE IN ALL THESE PROCESSES THROUGH THEIR ABILITY TO RECOGNIZE NONNATIVE CONFORMATIONS OF OTHER PROTEINS. THEY BIND EXTENDED PEPTIDE SEGMENTATION AND MEMBRANE TRANSLOCATION, OR FOLLOWING STREES-INDUCED DAMAGE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This SWISS-PROT entry is copyright.
